

Runbook: ERP Batch Job Failure — FI Posting Error F5 001

Field	Value
System	ERP
Category	Batch / Financial Posting
Error Code	F5 001
Severity	P2
Last Updated	2026-06-05
Owner	FinOps L2 — ERP Batch Operations

Symptoms

- Nightly batch job `FI_POST_NIGHTLY` ends with status **Cancelled** in job scheduler (SM37).
- Short dump or job log contains: `F5 001: Document type SA not allowed for company code 2000 in this period.`
- Partial posting: some company codes complete, others fail.
- Follow-on jobs (dunning, interest calculation) remain on hold.

Root Causes (Known)

1. Posting period closed for company code — batch attempted posting to locked period.
2. Document type not configured for company code in posting variant.
3. Authorization missing for batch user `BATCH_FI_PROD`.
4. Lock entry from failed previous run not cleared (enqueue lock).

Prerequisites

- SAP access: SM37, 0B52 (period control), SU53 (auth check).
- Batch job name and variant from ticket or alert email.
- Company code and fiscal year/period.

Resolution Steps

Step 1 — Review job log

1. Transaction SM37 → enter job name FI_POST_NIGHTLY and date.
2. Open **Job Log** and locate first red error line with F5 001.
3. Note company code, document number (if any), and period.

Step 2 — Check posting period

1. Run 0B52 for company code from error.
2. Verify period status: columns **1** (posting) and **2** (accounting) must allow posting.
3. If period closed incorrectly early, request **Finance Controller** to reopen — do not reopen without approval.

Step 3 — Clear enqueue lock

1. Transaction SM12 → list locks for user BATCH_FI_PROD.
2. Delete stale locks older than 24 hours related to FI_POST tables.
3. Confirm with colleague if lock owner is active batch job.

Step 4 — Fix document type configuration (if config error)

1. Verify posting variant in customizing: 0BC4 / document type assignment.
2. If recent change caused error, open **Change record** and coordinate rollback with Basis team.
3. Config changes require transport — not for ad-hoc prod edit.

Step 5 — Restart batch

1. Release dependent jobs only after successful test run.
2. Run batch variant for **single company code** first (test mode).
3. If success, release full nightly variant.

Rollback

- Reverse posted documents from partial run using FBRA batch reversal program ZFI_BATCH_REVERSE — requires Controller sign-off.

Verification

- Job log status **Finished** with 0 errors.
- Dependent jobs released and completed.
- Control totals match expected document count from job variant documentation.

Escalation

- Period reopen required: **Finance Controller + Audit notification** if after soft close.
- Auth errors for batch user: **SAP Security / Basis team**.
