

Runbook: ERP GL Reconciliation Break (FI-GL-007)

Field	Value
System	ERP
Category	Finance / Reconciliation
Error Code	FI-GL-007
Severity	P1 (month-end) / P2 (daily)
Last Updated	2026-07-20
Owner	FinOps L2 — General Ledger

Symptoms

- Sub-ledger (AP/AR) total does not match GL control account balance.
- Reconciliation report `FBL3N` shows break amount $\neq 0.00$ for company code `1000`.
- Error in batch job log: `FI-GL-007: Reconciliation difference exceeds threshold – diff=45230.15 EUR.`
- Month-end close checklist blocked at step "Intercompany reconciliation sign-off."

Root Causes (Known)

1. Manual journal posted to control account instead of sub-ledger.
2. Interface posting from OMS/CRM failed mid-batch — partial documents posted.
3. Currency rounding difference on multi-currency documents.
4. Timing: sub-ledger report run before nightly auto-post job completed.

Prerequisites

- SAP/display access: `FBL3N`, `FB03`, `FS10N`.
- Reconciliation workspace folder for evidence export.
- Company code and fiscal period from ticket.

Resolution Steps

Step 1 — Quantify the break

1. Run FBL3N for GL account (e.g., 160000 Trade Receivables) for the period.
2. Compare to AR aging total from FBL5N.
3. Record exact difference amount and document count mismatch.

Step 2 — Find orphan documents

1. Run reconciliation tool: transaction F.13 (GL Reconciliation) or custom Z-report ZFI_RECON.
2. Export list of documents in GL but not in sub-ledger (and vice versa).
3. Sort by posting date — look for batch ID pattern INT-OMS-* or INT-CRM-.*.

Step 3 — Correct interface posting failures

1. For failed interface documents, check /var/log/erp/gl-interface.log for error at posting time.
2. Reverse incorrect partial posting via FB08 (reverse document).
3. Re-run interface job: SM37 → job GL_INT_DAILY_* → Release and monitor.

Step 4 — Post adjusting entry (if immaterial)

1. Materiality threshold: ≤ 100 EUR — L2 may post rounding adjustment to account 689000 Rounding Differences.
2. Above threshold — require Finance Controller approval before adjustment.
3. Document reason code: RECON-ADJ in line item text.

Rollback

- Reverse adjusting entries with FB08 if root cause fixed and true-up posted from sub-ledger.

Verification

- FBL3N vs sub-ledger difference = 0.00.
- Month-end checklist step marked complete with attachment.
- No new FI-GL-007 in next scheduled reconciliation job.

Escalation

- Break > 50,000 EUR: notify **Finance Controller** and **Internal Audit** same day.
- Suspected fraud or duplicate payment: escalate to **Financial Crime** — do not adjust without investigation.
