

Runbook: OMS Inventory Sync Failure (OMS-INV-210)

Field	Value
System	OMS
Category	Inventory / Integration
Error Code	OMS-INV-210
Severity	P2
Last Updated	2026-05-10
Owner	FinOps L2 — Fulfillment

Symptoms

- Available-to-promise (ATP) quantity in OMS does not match warehouse system (WMS).
- Orders fail allocation with: `OMS-INV-210: Insufficient stock – SKU mismatch with WMS.`
- Spike in tickets every **month-end** and during **promotional campaigns**.
- WMS shows stock; OMS shows 0 for same SKU and warehouse location.

Root Causes (Known)

1. WMS → OMS inventory delta feed delayed or stopped (SFTP file not delivered).
2. SKU mapping table out of date — new product variant not mapped.
3. Reserved quantity not released after cancelled orders (ghost reservation).
4. Clock skew causing delta files rejected as "future dated."

Prerequisites

- OMS inventory admin access.
- WMS read-only portal or latest `inventory_delta_*.csv` from SFTP drop zone.
- SKU and warehouse location code from ticket.

Resolution Steps

Step 1 — Check last successful sync

1. OMS Admin → **Inventory** → **Sync Status**.
2. Note `lastSuccessfulSync`, `recordsProcessed`, `errorCount`.
3. If `lastSuccessfulSync` > 2 hours ago, proceed to Step 2.

Step 2 — Verify WMS feed delivery

1. Check SFTP inbox: `/incoming/wms/inventory_delta/` for today's file.
2. Expected filename pattern: `inventory_delta_YYYYMMDD_HHMM.csv`.
3. If missing, contact **WMS Operations** to re-send delta file.

Step 3 — Manual delta import (single SKU)

1. OMS Admin → **Inventory** → **Import Delta**.
2. Upload corrected CSV with columns: `sku`, `warehouseId`, `quantityDelta`, `snapshotTime`.
3. Run import in **validate-only** mode first; fix validation errors.

Step 4 — Clear ghost reservations

1. Search reservations: **Inventory** → **Reservations** → **Filter by SKU**.
2. Cancel reservations tied to orders in status `Cancelled` or `Expired`.
3. Run **Recalculate ATP** for affected SKU/warehouse.

Step 5 — Fix SKU mapping (if applicable)

1. OMS Admin → **Product Catalog** → **SKU Mapping**.
2. Map WMS product code to OMS SKU for new variants.
3. Trigger full snapshot sync for that SKU only.

Rollback

- Import rollback available within 1 hour: **Inventory** → **Import History** → **Rollback**.
- Do not run full inventory rebuild during peak order hours (10:00–14:00 CET).

Verification

- ATP in OMS matches WMS within ± 1 unit for test SKU.
- Failed allocation orders can be re-processed via **Retry Allocation**.
- Sync status shows green for all warehouse locations.

Escalation

- WMS feed missing > 4 hours: **P1 incident** — potential overselling risk.

- Affected SKUs > 500: escalate to **OMS Platform team** for bulk snapshot reload.
