

Runbook: OMS Order Stuck in Pending Payment

Field	Value
System	OMS
Category	Order Lifecycle
Error Code	OMS-4402
Severity	P2
Last Updated	2026-06-28
Owner	FinOps L2 — Order Management

Symptoms

- Customer order remains in status **Pending Payment** for more than 30 minutes after checkout.
- OMS order detail page shows payment status `AUTHORIZATION_PENDING`.
- Log entry: `OMS-4402: Payment authorization callback not received – orderId={uuid}`.
- CRM may show order as "Confirmed" while OMS shows "Pending Payment" (state mismatch).

Root Causes (Known)

1. Payment service callback webhook failed (HTTP 500 or timeout).
2. Order ID mismatch between OMS and payment provider reference.
3. Idempotency key collision on retry — callback rejected as duplicate.
4. OMS event consumer lag; authorization event stuck in Kafka topic `payment.events`.

Prerequisites

- OMS admin portal access (role: `OMS_SUPPORT`).
- Read access to Kafka consumer group `oms-payment-consumer`.
- Order ID or customer reference number from the support ticket.

Resolution Steps

Step 1 — Locate the order

1. In OMS Admin → **Orders**, search by order ID or customer email.
2. Note: `orderId`, `paymentReference`, `createdAt`, current status.
3. Open **Event Timeline** tab and check for missing `PaymentAuthorized` event.

Step 2 — Verify payment with provider

1. Log into payment provider portal (internal tool: `PayVerify`).
2. Search by `paymentReference` from OMS.
3. If payment shows **Captured** or **Authorized** externally but OMS is pending → proceed to Step 3.
4. If payment failed at provider → advise customer to retry checkout; close ticket as user-side issue.

Step 3 — Replay payment callback (manual)

1. In OMS Admin → **Tools** → **Replay Webhook**.
2. Enter `orderId` and select event type `PAYMENT_AUTHORIZED`.
3. Click **Replay** — system re-fetches authorization from payment provider API.
4. Wait 60 seconds and refresh order status.

Step 4 — Force state transition (if replay fails)

1. Only if L2 approval obtained and payment verified at provider.
2. OMS Admin → Order → **Advanced** → **Force Status Update**.
3. Set status: `Payment Confirmed` → triggers fulfillment queue.
4. Add internal note with payment provider transaction ID and approver name.

Step 5 — Release fulfillment hold

1. Confirm order moves to **Ready for Fulfillment**.
2. Check warehouse queue `fulfillment.pending` for the order ID.
3. If not present, trigger: **Actions** → **Re-queue Fulfillment**.

Rollback

- Do not force status if payment is not confirmed at provider — risk of shipping unpaid orders.
- If wrong order updated, use **Revert to Pending Payment** within 15 minutes (audit window only).

Verification

- Order status = `Ready for Fulfillment` or `Allocated`.
- Event timeline shows `PaymentAuthorized` with timestamp after fix.
- CRM order status synced (allow up to 5 min for CRM-OMS sync job).

Escalation

- Kafka consumer lag > 10,000 messages: escalate to **Platform / Messaging team**.
- More than 20 orders affected in 1 hour: declare **minor incident**, link to Problem PRB-OMS-88.
